

**SEPAR
CHEMIE**

We clarify it for you.

Innovative chemicals
for the treatment of water.

Our Range of Services

Solutions for all kinds of water treatment problems

We develop and supply chemical products for numerous processes dealing with the treatment of water.

The strength of **SEPAR CHEMIE** lies in our experience with the most varied applications in industries and communities that we have gathered over the years, combined with the option to adapt the products of the **POLY SEPAR®** range to the individual requirements of the customer.

Specialty chemicals for industrial waste waters

Our products are successfully employed in the most varied industry sectors. With our broad product range we can treat a whole variety of problems with water treatment, whether it is in the:

Food industry

- *Cationic flocculants*
- *Coagulants*
- *Emulsion splitters*
- *Defoamer concentrate*

Metalworking industry

- *Liquid heavy metal complexing agents*
- *Emulsion splitters*
- *Adsorbents*

Competent **service** clears your problems

At **SEPAR CHEMIE** our customers and high quality technical advice take priority. We aim to make your processes more profitable and effective.

In addition to our **POLY SEPAR®**- products we offer the following services:

- *Joint and detailed analysis of problems and situations*
- *Development of formulas on a laboratory scale*
- *Free onsite trial*
- *Comprehensive and free consultation on process engineering, guidance on products and economic efficiency analysis*
- *Trouble-shooting*
- *Preparation of samples*
- *Flexibility through our own warehousing*
- *Ready to use liquid polymers*

We clarify it for you.

SERVICES

Paper industry

- *Retention aids*
- *Defoamers/deaerators*
- *Bacterial growth inhibitors*
- *Crystallisation inhibitors*
- *Trash catchers*
- *Flotation agents*

Automotive industry

- *Emulsion splitters*
- *Adsorbents*
- *Coagulants*

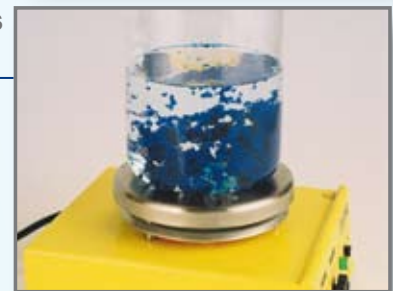

Stone industry

- *Anionic and cationic flocculants*
- *Odour inhibitors*

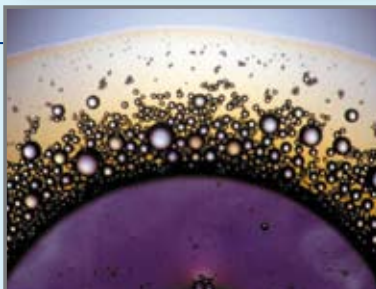

Paint and coatings industries

- *Adsorbents*
- *Flotation agents*
- *Decolouration agents*
- *Odour inhibitors*
- *Flocculants*

Oil and gas wells

- *Anionic and cationic flocculants*
- *Coagulants*

Waste disposal sector

- *Viscosity reducers*
- *Emulsion splitters*
- *Metal complexing agents*
- *Adsorbents*

Problem solving at waste water plants

We can target and solve recurrent problems such as excess COD and AOX, floating and bulking sludge, offensive smell as well as any problem of sludge stabilisation with our **POLY SEPAR®**- products specifically developed for these applications.

Individual chemicals for various process applications

SEPAR CHEMIE produces and supplies chemicals for the treatment of waste waters individually tailored to the characteristics incurred in each process of treatment.

■ **Flocculants for waste water treatment and**

sludge dewatering in communal and industrial waste water plants.

■ **Adsorbents, heavy metal precipitants and odour**

controlling agents for the treatment of industrial process water.

■ **Viscosity reducers for oil dewatering, crude oil, waste oil, slop oil.**

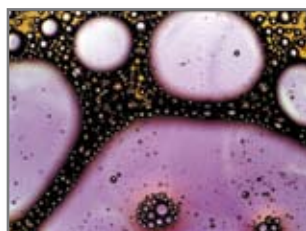

■ **Solid and liquid adsorbents and flocculants for the**

targeted treatment of waste waters with excess COD-value.

■ **Emulsion splitters for the preparation of drilling**

oil and grinding oil emulsions or oil-laden wash-waters.

■ **Adsorbents and flotation agents for the removal**

of dissolved paint particles in industrial waste waters.

■ **Specialty chemicals for paper production.**

■ **Defoamer concentrates for municipal and industrial waste waters.**
